Review Summary: HDD Guardian Portable is a good choice for any potential computer troubleshooting. It's perfect for experienced users or for those who want to keep an eye on their computer hard drives. However, the program may be a bit complicated for those with little experience. Audio Clock is a powerful program that can keep an eye on your music files. As its name may suggest, the program provides you with the information needed to time your music files. You can use this tool to make your music more "symphonic" by crossfading between different tracks, and also use it to create impressive-sounding music loops. We'll start by taking a look at the program itself, and then we'll highlight its major features. Interface and features The program features a clean layout with a simple menu. There's an option to add files to a queue that will be analyzed later, a "miscellaneous" menu and a "settings" option. The Settings button opens a dialog where you can configure the program's options. First, there's the Audio Clock setting, which has three options: Set, Manage Tracks and Set Now. The first two let you control the timing of a song or music album, while the third option uses the default value. After those settings, the program also allows you to choose if you want the results to be added to an existing project. If there's only one project, then you can select "Update existing project" in the General Settings option. If you have multiple projects, then you should select "Add new project," and you can do the same thing as above. The option to save the settings appears as well. Finally, the folder list allows you to browse through your music and select the tracks you want the
