April 11, 2015 Lansing's past comes alive in exhibits at Fogg Museum Fans of Lansing's history will be fascinated by the latest exhibits at the Fogg Art Museum. Go Back to the Beginning: The Biography of Lansing showcases the works of 40 local artists that explore different regions of the United States. The exhibit, from the car window stickers to the murals and portraits, is on display until May 24, 2015. The exhibits at Go Back to the Beginning are a collaboration of the Fogg Art Museum, East Lansing School of Art, Lansing Historical Society, and Cultural Resources Institute. The "biography" is a look back at some of the local artists and the Lansing of their time. The artists include East Lansing artists David Zahn, Ann Swenson, and Drew Larkin; West Michigan artists Gregory Mark and David DeMak; and California-based artists Brian McCollister and Hank Friese. Most of the artists painted or drew in oil on canvas, while some of the more sculptural pieces include Dan Hirsch's

pillow which was made of gravel, birch bark, string and old license plates. Eicosanoid inhibition by anti-sense oligonucleotides. The ability of eicosanoids (substances derived from arachidonic acid) to regulate immune responses and to promote inflammatory tissue injury has led to considerable interest in the development of inhibitors of eicosanoid biosynthesis. These inhibitors include agents that decrease the biosynthesis of arachidonic acid by inhibiting the activity of phospholipase A2 or cyclooxygenase, or that affect the cellular uptake, metabolism and release of the eicosanoids. However, many of these compounds have serious side effects. Here we review the action of a more specific inhibitor, an anti-sense oligonucleotide that binds to and prevents the translation of mRNA coding for phospholipase A2. This compound strongly inhibits eicosanoid biosynthesis in all of the cell types which produce the compound, as well as in cell systems which have been previously considered resistant to these inhibitors. These data argue for the use of anti-sense oligonucleotides in the treatment of inflammatory diseases. Clinicopathological features of patients with aggressive variant of intraductal
